## **Press Release for the 3GSM World Congress in Cannes, 20<sup>th</sup> – 23<sup>rd</sup> February 2001**

### **7 layers provides new test solutions for GPRS and WAP**

7 layers, one of the top solution providers for the mobile communications industry, has found new answers to speed up the development process of GPRS and WAP applications.

7 layers will make a public demonstration of their newly developed prechecks for GPRS and WAP applications on mobile terminals during the 3GSM World Congress.

These newly developed tests make it possible to speed up the development process considerably and help to improve product quality, an important prerequisite to enhance acceptance of these new technological developments.

**Interested visitors of the 3GSM World Congress are welcome to meet 7 layers at booth No. E 31 in Hall 1 for an immediate checkup of the WAP and GPRS applications on their mobile terminals.**

Checks will be performed with the help of newly developed GPRS test cases, GPRS functionality testing and WAP test solutions that go far beyond the current scope of WAP testing.

7 layers supports developers and manufactures of new communications technologies and products from development to qualification. Key competence areas are GSM Phase 2/2+, GERAN, GPRS, 3G, WAP, adHoc technologies and Bluetooth™.

We provide manufacturers of software, chipsets, modules or end-user products - network operators and service providers - with a complete service range:

- Enhancing technology and product development
- Optimizing test techniques
- Integrating test solutions into product development
- Worldwide qualification / certification

Whilst complexity of communications products and quality demands are rising, development costs and time to market need to be reduced. 7 layers helps clients to achieve these goals by integrating independent testing into the product and service development process. We run our own and our clients' test laboratories by using most modern testing techniques, automating the complete test process and keeping it constantly up to date.

7 layers is situated in Ratingen (Germany) with a subsidiary in Irvine (USA) and joint ventures in Beijing (China) - Ritt7layers - and Cambridge (UK) – 7 layers UK Ltd.- and sales offices in France, Japan, UK –
