

7 layers Inc.

The only US facility offering full scope Cellular and Bluetooth development and test services

Las Vegas, October 2002.

In order to improve the services 7 layers Inc. offers to the American market, the company has moved to new premises with larger and better equipped laboratories.

7 layers Inc. is now the only US facility that can offer a complete services for product development, certification and qualification testing for wireless communications products. 7 layers Inc. covers services for all major wireless technologies like GSM, GPRS, TTA and Bluetooth™.

7 layers Inc. is part of the worldwide 7 layers group which is already deeply involved in third generation Cellular technology development., like UMTS and EDGE. Especially for the American market 7 layers can already offer EDGE research and development tests that speed up technology and product development considerably.

### **About 7 layers**

7 layers is an engineering company for the wireless communications industry specialized in fields such as Bluetooth™, GSM, GPRS, 3<sup>rd</sup> generation Cellular technologies. The company supports manufacturers of chip sets, terminals and end-user products as well as test houses and test equipment manufacturers by offering them a wide service spectrum ranging from technology and product development to test services and certification or qualification. 7 layers has test and service centers in Ratingen (Germany), Irvine (USA), Beijing (China) and Cambridge (UK).
